Supporting you with Distance Learning and your Wider EdTech Strategy

Skipton Girls' High School is proud to have been selected as an EdTech Demonstrator School. This is a Department for Education project supporting schools with EdTech at **no cost.**

The project has 2 main aims:

1. Help support schools with **any aspect** of their distance learning strategies during the Covid-19 outbreak

2. Support schools over the longer term with their use of EdTech to enhance teaching and learning

At Skipton Girls' High School we have had a 1-1 laptop scheme in place for over 10 years and have developed a huge range of skills and experiences we are keen to share with other schools. Our support is tailored to your individual needs, independent and provided by educators who understand the school context.

Here are some of the ways we could support you through Covid-19 and beyond:

- Leading on a teaching and learning strategy involving EdTech

- Recorded or live training sessions to meet your specific needs on effective distance learning strategies

- Training in the use of software packages to help with distance learning such as Microsoft Teams or Microsoft OneNote

- Advice and support on engaging learners online

- How to reach students who don't have easy access to digital devices

- Selecting the right digital platforms for you

- Creating and managing an efficient IT infrastructure

- Support for colleagues needing to improve their IT skills

- Bespoke course content creation tailored for your students to help them with their distance learning

- Assisting with the use of ICT for more effective staff collaboration, sharing and development
